Portfolio

EDUCATION

2025
ASERRÍ TECHNICAL VOCATIONAL HIGH SCHOOL

- Software Development Technician

2020
ASERRÍ HIGH SCHOOL

- High School Diploma

COURSES

- Linux Unhatched – 2025
- Introduction to Data Science – 2024
- Introduction to the Internet of Things– 2024
- Programming Essentials in Python – 2023
- IT Essentials – 2023
- Advanced English (C1) – 2022

TECHNOLOGIES

- Python
- .NET (C#)
- SQL, MySql, SQLite
- JavaScript, HTML, CSS
- Linux
- Git & GitHub
- FastAPI

SKILLS

- Teamwork
- Effective communication
- Problem solving
- Logical thinking
- Adaptability
- Continuous learning
- Time management

PROFILE

Software Developer specializing in Python and .NET (C#), with experience in application development, process automation, and data processing. Developed solutions for extracting and analyzing information from structured and unstructured documents using parsing techniques and regular expressions (Regex).
Knowledgeable in web development, SQL databases, and basic Linux server administration. Eager to continue growing professionally and contribute to the development of solutions that address real-world problems.

EXPERIENCE

- **XperttaLegal** — **OCT 2025 - DIC 2025**

  Software Development Intern

  - Developed Python scripts to automate the processing of legal documents.
  - Extracted and structured data from public documents using text parsing techniques.
  - Developed internal tools to optimize workflows and reduce manual tasks.
  - Used AI models to automatically identify and filter relevant information from legal documents.

PROJECTS

- **Judicial Data Extraction System**
  - Developed a complete Python pipeline to process and extract structured data from unstructured legal documents.
  - Implemented regular expressions (Regex) and text segmentation techniques to identify case numbers, names, dates, and other relevant information.
  - Automated document processing and the generation of legal documents based on the extracted data.
- **Linux Server Configuration and Automation**
  - Configured and administered Linux servers, including SSH, UFW firewall, and service management using systemd (start, stop, and restart services).
  - Administered MySQL databases on Linux servers, including user creation, backups, queries, and routine maintenance.
  - Deployed local AI models integrated with Python scripts to automate data processing workflows.
- **Local Grocery Store Management System**
  - Desktop application developed in .NET (C#) for inventory, sales, and customer management for a local business in Mexico.
  - Integrated SQLite database for local data storage without external dependencies, making it ideal for the client's environment.
  - Includes sales reporting, stock management with low-stock alerts, and daily transaction tracking.
